

**FOR IMMEDIATE RELEASE*****CDF Corporation First to Market Dunnage-Free Aseptic Bags***  
Innovative new aseptic packaging reduces transport and packaging costs.

Plymouth, MA, July 10, 2007 – [CDF Corporation](http://www.cdf1.com), a leading manufacturer of liners and other value added products used in industrial shipping and storage containers, announces its exclusive new dunnage-free [aseptic bags](#); a revolutionary product that will fill a 30-year industry void and drastically reduce packaging labor and materials costs.

CDF's new dunnage-free [IBC liner](#) is constructed to protect non-viscous liquids during rail transit without the use of additional packing materials. With normal shipment of non-viscous liquids via rail, foam dunnage must be wedged in between the [aseptic bag](#) and the tote's lid to reduce flexcrack damage. With CDF's new dunnage-free aseptic bags, no foam dunnage is necessary, even during extensive railway transport.

"The dunnage-free aseptic bag is yet another example of CDF leading the way with new technology," said Tom Tealdi, CDF Regional Sales Manager. "CDF's dunnage-free aseptic bags are a solution for many problems that have been in the industry for well over 30 years."

CDF's dunnage-free aseptic bags can save customers the extensive time and labor associated with foam dunnage. The heavy-duty film liner is made of FDA-approved materials and effectively protects sterilized food products, ensuring safe delivery to their destination.

"In developing the dunnage-free liner, CDF continues to demonstrate its innovative skills as it addresses the market's need to deliver product in a dependable fashion using intermediate bulk containers," said Phil Lanier, IBC National Sales Manager.

The high-capacity aseptic bags accommodate fitments up to three inches and up to 300 gallons of liquid. The bags lock out light, moisture and oxygen and are made in America.
