

worldwide innovator in flexible liquid packaging

FOR IMMEDIATE RELEASE

CDF exhibiting IBC liners at the NW Food Manufacturing and Processing Expo

Plymouth, MA, January 2, 2011- CDF Corporation, a leading manufacturer of [liners](#) for [drums](#), [pails](#), [intermediate bulk containers](#) and [flexible packaging](#), will display flexible packaging solutions at the Northwest Food Manufacturing and Processing Expo, Booth#912-918.

The Northwest Food Manufacturing and Processing Expo 2011 will be held January 17th to the 19th at the Oregon Convention Center in Portland, OR. The [Northwest Food Manufacturing & Packaging Expo](#) (Expo) is considered the largest regional Food Processing Expo in North America. The event is held annually in Portland and attracts almost 4,000 food processing industry professionals from across the country. In addition to featuring over 400 exhibitor booths in the SOLUTIONS Marketplace Exhibit Hall, the event offers industry relevant sessions with industry relevant information featuring high level speakers to encourage a broad based attendance by food processor company personnel.

CDF has a wide range of flexible products to satisfy the needs of product manufacturers and producers. CDF's liners for intermediate bulk containers, drums and pails provide outstanding performance in critical food applications.

[Formfit liners](#) are manufactured to form fit the internal shape of your intermediate bulk container. Form-fit IBC (cube-shaped) liners provide high performance in critical applications, such as top-fill applications using a bridge or automated filler; containers with no access doors for placing a liner at the bottom; high speed fills and viscous products that would get caught in the folds of pillow-shaped liners.

The [Air-Assist liner](#) allows the user to realize a more complete evacuation of their product. Less residual product is left inside the liner, resulting in savings to the user. Air-Assist liners are specifically designed for high viscosity products.

The most effective moisture and oxygen barrier for packaging environmentally sensitive products is a [High- Barrier Foil liner](#) constructed from an aluminum foil lamination. Moisture barrier liners incorporate an impermeable layer of aluminum foil to ensure the long-term integrity of a wide variety of environmentally sensitive products, including nylon, Surlyn®, EVOH, certain pharmaceuticals and various high value foods.

[Pillow-shaped liners](#) are typically constructed with two or three plies of linear low-density polyethylene (LLDPE) and a barrier film when used for aseptic and oxygen-barrier applications. When filled, these industrial tote liners form the shape of a pillow.

The [Cheertainer](#), CDF's innovative form-fit [bag-in-box](#), is an ideal solution for small and large volume needs. Ranging in size from 5 to 20 liters, the Cheertainer is UN certified and manufactured with [CDF1 Smart Seal Technology™](#), ensuring the ultimate reliability of the package.

About CDF Corporation

CDF Corporation is a privately held flexible packaging company that leads the U.S. market in liners for industrial containers and custom packaging solutions. Since its inception in 1971, the company has maintained an entrepreneurial approach to industrial packaging, manufacturing and promotion. CDF manufactures products ranging in sizes from 2 gallons to 330 gallons in its Plymouth, Massachusetts ISO certified facility. www.cdf1.com
