

### Production Processes

CDF products are manufactured using thermoforming, blow molding and heat sealing processes.

### Packaging

CDF's products range in size from 3 oz to 330 gallons and can be customized to fit the individual customer's applications.

### Distribution

CDF has been an industry pioneer in the source reduction of its product lines. By using less plastic in more efficient ways, CDF products create space saving advantages unseen by competitive products.

## CDF PRODUCT CRADLE-TO-CRADLE LIFE CYCLE

### Raw Material Processing

### Product Use

### Recovery

### Raw Material Processing

The plastic resin used by CDF is a type of synthetic or man-made polymer; similar in many ways to natural resins. Through CDF's plastic regeneration program, 3 million lbs of internally generated plastic is recycled every year in its manufacturing facilities.

### Recovery

The majority of CDF products are recovered in two ways – reclamation and recycling. Reclamation is the process where plastic is chopped into flakes, washed to remove contaminants and reused or sold to end users to manufacture new products. Many CDF products are manufactured using recycle codes 2, 4 and 5 films that can be recycled at national recycling facilities.

### Product Use

CDF's products are used in a variety of industries including food and beverage, chemical and cosmetic.
